PART I: SOCIAL FACTS
AND
ASSUMPTIONS

2.

1. PROBLEMS AND PANACEAS

"Most of the one hundred thousand Indians of this province are living in dire poverty. A high percentage are unemployed and are educationally and socially unequipped to obtain and hold a job. Little real effort has been made to help the Indians develop new industries to replace the declining industry of hunting and trapping. It has been easier to give relief than to develop industries."

The Royal Bank of Canada, in its Monthly Letter (February, 1966) quotes with agreement this statement from a 1964 brief of the Ontario Division of the Indian-Eskimo Association of Canada. Yet the conditions referred to here, only now beginning to be understood and appreciated, persist in spite of millions of dollars' expenditure intended to alleviate distress and change things for better.

"A great opportunity brilliantly disguised as an insoluble problem". This is how John W. Gardner characterized his new task when he entered the Johnson Administration as Secretary of Health, Education and Welfare. He might have been referring to the Indian question in North America, or in Ontario, or in Kenora, or in Cornwall, or in Toronto. Certainly there is a problem, as we shall soon see. But whose problem is it? Those who see that Indians are not motivated to work, to be thrifty, to attend school, apparently see it as an Indian problem.

Indian spokesmen see it quite differently. There is the fatalistic lament of an old Indian who said "Once we were men". Things are not what they were and he does not say how or why. There are others who see, as one Indian writer put it, "the Indian as an anonymous face in the crowd, invisible, alienated from the main stream of our Utopian Canadian society... Yet these are the men who once had a way of life, language, culture, religion and a sense of values which were very unique. We can never imagine what civilization, what culture, what cities and towers might have been. All this was squeezed out of the Indian nation in the same way juice is squeezed out of an orange... Now you have named the residue the Indian problem, and you wonder what to do with it." (Lavallee, 1967.)

In her address, Mrs. Lavallee left little doubt that there was a problem, that the white man had created it, but both sides must work at it now. There are

still other Indians who, perhaps unconsciously, use passive resistance to efforts at amelioration. They go limp when a new policy is announced, for they know in advance it has a trick behind it, not visible to the Indians' eye, but there, nevertheless. One Indian leader described this point of view:

"They believe that if the white man were to give North America back to the Indian with all its real estate just as it stands, there would still be a great debt to be paid."

Not often would the case be stated so strongly in public and in this case the speaker was revealing how others felt. He, himself, did not hold these extreme views, indeed there is not a coherent Indian position, a point of view. There is no Indian party, no strong union binding many disparate points of view into a single voice. These Indians have no Ghandi, or Nehru. Relatively few in number, with great regional and language differences, they lack the resources to create a strong organization. The result is that building any solid combination of forces within the Indian community is slow and arduous.

Under these conditions the Indian people are particularly vulnerable to two kinds of "help". First, there is the enveloping and stultifying effects of governmental support, over which their control is limited. Second, there are the local messiahs, and little sects and cults that spring up here and there, each offering panacea to dependency, alcoholism, poverty. Whatever the evil, the messiah will attack it. For some the schools cause the problem; for others moving to the city is bad; for others failure to leave the reserve is responsible for ill effects; each forming a little group, each making promises and raising hopes. All the while, in spite of government spending, in spite of messiahs, in spite of research, and new proposals, the problems persist. What then is the solution?

One joins the problem-solving chorus with hesitation. It is particularly sobering, after having studied the proposals others have made, to agree that they are sensible enough. Indeed the work that is going ahead now to ameliorate the situation is what one would propose, if it were not already being done. Yet the

good ideas, the new innovations are often splendid on paper, but put forward too late, too timidly, tried once for the sake of publicity then dropped before the results could be tested. In short, the good ideas are not applied with a flare. They do not catch anyone's attention. Their failure, when one thinks of the millions spent, is puzzling. Was something forgotten in the elaborate programme? Perhaps it is a small but essential item (such as genuine participation by Indians in the planning). The big, more obvious and more costly ingredients have all been provided for. If we had been baking a cake we would say that the baking powder has been forgotten, for the cake is as flat as a plate.

The conventional solution to the Indian situation, the popular panacea, is education, but we see little evidence that the approaches now in vogue will bring about significant changes soon enough to be useful. A new approach is needed. It is for this new approach, or at very least an approach to an approach, that we seek in this study. If the small single ingredient, the baking powder, can be identified, then the larger items will be found, and will fit into place.

What is being done now, or what is on the drawing boards, should go on. But the way it is done should change. The relationship between helped and helper should somehow be reversed. The Indian problem is Ontario's problem. Let us hope the Indians can help us solve it.

Education could be the bond through which a partnership could be forced between the Indian, who has far to go, and the majority group, who must learn the hard lesson of humility for a job badly done to a once proud people.

The Indian group in Ontario is numerically small with about 50,000 registered Indians, with an additional number probably another 50,000 who are not registered but who can be culturally identified as Indian. It is a relatively small group, only about .08% of the Ontario population. But it is not a population likely to disappear. On the contrary, the birth rate is the highest of any ethnic group; for the province as a whole, 11% are under 5 years of age, while for the Indian it is 17%. (See Appendix for more data.)

Most of them are segregated in reserves in isolated territories, in urban slums, or in shacks outside mining and industrial centres. A very small part of this group, the numbers unknown, has moved into the middle class and have white collar occupations in our cities and towns. It is estimated one hundred school teachers of Indian origin are employed in metropolitan Toronto, more than all the Indians teaching in federal schools in Ontario. But this small group we must ignore in this study except to say it is too small, too little known to give children now in school effective incentives.

It is the poor Indian who must engage our interest. The isolation, poverty and low social status tend to retain the population artificially in concentrated pockets, where conditions we have come to know are perpetuated and worsened. It is true there are few full blooded Indians in Ontario today. A number, perhaps a majority, could "pass" in a Caucasian society without the colour identification obtruding.* Yet for most of these who do pass, this is no solution. Passing leaves a sense of betrayal of a social legacy. They prefer to have their origin known, and to have it known proudly. Most Indian persons, however light skinned, when they wish to distinguish the majority group, will use the popular labels one hears in any Indian meeting. "We are Indians, they are white".

On the other hand the majority group, either when attempting to do good in the over-solicitous way that too often accompanies calculated acts of charity, or in the more brutal language of the street corner or the school ground, the racial label is there, explicit or implicit, to injure and scar the one receiving this perjorative word. Even the classroom, informants tell us, is not free of invidious ethnic comparisons. They

*It is striking how the original designations of redskin and paleface survive in modern nomenclature.

will recount, without much prompting, that the stereo-types of lazy, dirty, drunk, are freely handed out. Middle class Indians, immaculately dressed when they go into a bar, must brace themselves for slights and taunts from persons, who, in a more sober mood, would avoid all contact. Indian women are particularly vulnerable to such chance remarks, especially in northern towns.

It is in the context of the social realities that education policy must be conceived. Education cannot concern itself either with preparation for work and citizenship, or the classical goals of personal liberation and individual enrichment, without facing the social environment which has formed students of all ages, without considering where they are to go as they leave the classroom each day, as they graduate, or drop out. Such considerations may be avoided when considering the middle class student, though many would say they should not; for the Indian student consideration of the whole person (himself and his milieu) is a condition, a mandatory condition of effectiveness.

The environment of the student must be changed and the past is part of his environment. This cannot be changed, but we must try to alter and bring more close to the truth the oral, written and visual record. The present must be changed. With improvements in home and community; improvements in housing, diet, recreation opportunity, income and freedom from the thralldom of dependency. These are the elements out of which family life will be changed. Second to the family is the school in its claim upon the child, in its potential use to the adult. The school must be changed - a formidable task since it is now a subsystem caught up and operated by interlocking arrangements between a series of immensely powerful provincial, municipal and professional bureaucracies.

Where the student is on a treaty basis, there is the additional fact of federal involvement. It is the source of additional resources it is true, resources that Ontario has not seen fit to make available to non-treaty Indians. But it is another government, another elaborate bureaucratic chain of command; another structure to allow for overlap, (and underlap), buck passing, and jurisdictional squabbling.

The necessity for changes in the school and hence in its controlling bureaucracies is essential. We hear much about the need to motivate Indian students and parents toward high attainment in the school. The under-

lying thesis in this paper is that the change must first come in the educational institutions. It is here that motivation must be evidenced in concrete changes. Change is in the air in Ontario schools, and the proposals now being made are such as to benefit Indian students. But we must make a realistic prognosis of the speed with which these changes are to be made, and the possible effects on Indian students. In this paper we will make a number of recommendations in teacher training, curriculum planning and resources, school control. None of these are original; some were made years ago. Meanwhile, another generation of children has moved into the schools from homes where an uncounted number of parents are functionally illiterate, where English, if spoken at all, is a second language.

Can one entertain a realistic hope that these changes will be implemented on time, and in time to be effective? We think not. As a consequence we are suggesting, besides the more routine and obvious changes, other courses of action. These are suggested for two reasons.

First it is thought that action in the private sectors can be put in motion more quickly, and applied more precisely on the sensitive areas where change is most needed. Public or governmental services can follow up and incorporate lessons learned and gains made in these sectors. The private venture is flexible, can easily be dropped without maintaining a residual structure long after it has outlived its usefulness.

Second, the changes that are expected and required are such that there is no visible cause and effect relationship. There is no way of knowing, or showing that changes A, B and C are linked to school performance, much less to the less easily measured but critically important question of majority acceptance of Indians. The Indian people carry a large measure of hostility and resentment to the white man's world. They see the school as a device to control their thinking and win away their children to an alien world.* The Indian leaders will need a visible and symbolic manifestation of the white man's generosity of purse, and magnanimity of spirit to accompany the other necessary

*One exception is in the Six Nations Schools in the Brantford area, where all, or almost all teachers are Indian.

but less dramatic changes which are recommended.*

We do not speak of restitution of something wrongfully taken, nor expiation of guilt, but only of a large minded symbolic act of trust and friendship. Yet there is an obligation, as the Royal Bank of Canada News Letter (February, 1966) puts it. "We newcomers took the land of the native people. Whether it was a good thing or not; whether it was inevitable in the march of history or not: these are irrelevant. We took their land, disrupted their way of life, ruined their way of livelihood, and undermined their culture. We are challenged to discharge our obligation to them."

As a codicil, almost as a footnote to the foregoing, a word of warning and qualification. The Indians of Ontario, representing less than 1% of the population, do not loom so large demographically (as do the Negroes of Alabama, or Mississippi) that a threat of "Indian power" hangs over the future political life of the province. Yet the manner of this grouping in certain areas of the province gives them a good deal of leverage at election time, if they chose to vote en bloc. The franchise exercised this way is not condoned in a democracy, for it opens the door to many forms of exploitation. Yet it is a minority's middle weapon. The ultimate weapons which much smaller minorities than this can use, with paralyzing effect, must also be considered as alternatives to swift and generous action. There are many weapons of attack and withdrawal. So far the Indian has shown himself adept at withdrawal - the stoop, the hooded glance, the abject agreement to official proposals, alcoholism, the maintenance of traditional languages, the persistence of nativistic religious practices. Not often are these practised deliberately or manipulated consciously by sophisticated leaders. These are the latent weapons of withdrawal. The Sons of Freedom, a mere 2000 persons in British Columbia, representing a fraction of the population of the province have shown the impact of more skillful use of passive resistance. Hunger strikes, sit down or coup in operations and incendiarism are all self-inflicted wounds which the powerful state can not easily combat unless it uses completely totalitarian methods.

Ontario is in the happy position, before it is too late, to be able to plot a magnanimous course ahead. It will not cost much more than is now being spent with little effect.

* The American people, through their government, took certain actions in Hiroshima, such as we propose. In contrast the Germans have made no such large gesture to the Jews, nor have the governments of British Columbia and Canada taken any such action to the Japanese who were "relocated" by force from the west coast in 1942.

2. A MINORITY NOT LIKE THE REST

A plan to integrate Indian children in the schools has an implicit assumption about the status of the Indian groups in Ontario. This is that they should be gradually assimilated into white society. Officials will deny that this is so, but what evidence is there that in the educational enterprises available for examination that there are other goals? Our view is that assimilation is at variance with the foundation on which Canadian society has been established, that minorities have an immense resistance to assimilation, and that much is to be gained from encouraging rather than discouraging minorities. (Sim, 1959). Since the Indian group is a minority not like the rest, this contention is greatly strengthened.

This disinclination to deal with minority groups as minority groups in the schools is undoubtedly founded on good political sense. The majority group in the province will not brook a system of public education; will not pay for a system which recognizes minority rights. Private and separate schools, whether they are based on religious or cultural differences, are not illegal. They are permitted provided there is no charge to the taxpayor. This position, we say, is based on good political sense. We suspect that because the powerful majority will not support a more liberal policy, either toward supporting ethnically separate schools, or toward giving them substantial recognition within the state system. This fact, of benign intolerance to the emotional and humane needs of the minorities, must be established as a solid appurtenance in the social landscape of Ontario, before we can properly assess the prospects for the education of Indians in Ontario. It is the insistence upon Anglo-conformity * throughout the history of education in Ontario which makes it difficult to foresee how the Indian question can be dealt with effectively.

The powerful and wealthy minorities can find a way to separation. For a long time the big private schools have been offering culturally selective environments for a child from an upper-middle and upper class

* This phrase comes from the Coles, and while it referred to American Society it seems to apply equally to Ontario despite our bicultural heritage. See Cole and Cole, 1954, Chapter 6.

home. Some of these are operated with denominational religious sponsorship. Academically these are perhaps not superior to the better state schools. What then is their justification? Not since the days of Grant of Upper Canada, and McCulley of Pickering do we hear public utterances justifying them because they experiment with new methods. They seem now to serve several uses. They have a welfare function for children from well-to-do homes that are, for some reason, unsuitable for child rearing. They offer a haven for children who cannot survive in the large state schools. And then they provide a place where useful friendships and differential behaviours, including an unmistakable accent, can be acquired.

Other groups, usually with strong religious or ethnic convictions, are willing to "pay twice" to maintain a private school system. They may be fully organized boarding schools. They may be day schools. They may only offer after 4 o'clock or weekend exposure to specialized instruction in language, religion or cultural inheritance. For many of those groups the maintenance of a private school is a heavy financial burden, but it is accepted in the belief it is the only means of cultural survival. It is the only way of replenishing and maintaining group membership. If these groups are already in the middle class, if they do not suffer heavy occupational disabilities, if they are not visibly different, then the group memberships would easily be dissipated through inter-marriage and indifference to the norms of the sub-culture.

These private schools are an elaborate and expensive device to opt out of the state system. They are maintained, usually at the expense of parents, although Children's Aid Societies continue to send some of its wards to private schools. The charges are not made to the taxpayer, but ultimately it must be seen as a social cost. What of other minorities who are too poor, too divided ideologically, too dispirited, too lacking in leadership to resist the state system with its dominant middle class orientation. They do resist covertly by apathetically preparing their children for school, by allowing for an inferior performance at school. But this apathy of parents and children must not be taken as an indication that it is "their fault" they are doing badly in school. Apathy is their last sure weapon, lacking other means or skills to change the school system itself. As it is costly to society, a humiliating failure for the schools, and a limiting and stultifying

experience for the child. Let us examine this aspect of school performance. The usual tendency to look at the performance of the child is necessary; but the school system must also be evaluated more closely, since the Indian child is manifestly affected by the school's capacity to deal with poor children.

The lower-class handicap has been examined in a variety of studies relating to school performance and environment. Further, it has been established within certain limits that deprivation in the form of inadequate school buildings in lower-class districts, hostile attitudes on the part of teachers, school administrators and boards, results in loss of true educational equality. (see Davis, 1941; Reissman, 1963, Jones, 1966). Standardized intelligence (IQ) tests which attempt to measure inherited or fixed intelligence or ability, have been widely used in an attempt to fit the child into a standardized curriculum. But even here this supposed objective scientific type of test has been shown to carry unwittingly significant "class biases" which tend to down grade the child who has not been brought up in an environment where pencils, paper, books, and even working against time have been part of the cultural environment of the child. This fact has been emphasized by a research worker in the Canadian Teachers' Federation.

"The largest disadvantage is in the home. In its own way, the home is an educational agency. Thus a home where there is poverty, disease, indifference, a hand-to-mouth existence and a sense of defeat can hardly prepare a child for a productive school life. In other words, he is apt to be a poor reader and a poorly motivated student. The school programme which assumes a certain level of general knowledge from its students, may require from him a degree of understanding which is outside his experience. Thus, while he receives a programme of instruction which is equal to that given all the children, it may not give him equality of opportunity, since he is not equally ready for this programme.

"Moreover, his disadvantage may be compounded by streaming in the schools. The IQ tests employed in streaming measure not only ability, but also, to some degree, socio-economic status as well; that is to say, they tend to favour children from middle class backgrounds." (Channon, 1964, p. 15).

Values of the "culturally privileged" (and most teachers come from the middle class) tend to be imposed, often unintentionally, on lower-class children. Such things as cleanliness, politeness, punctuality, which are stressed in schools may have little meaning for slum children, except to sharpen their feeling of inferiority.

"The disadvantaged child may be offered a less demanding and more limiting programme which does not necessarily reflect his true potential. Where both home and school create barriers of this nature many children can be marked off as early drop-outs from the day they enter school." (ibid, p. 19).

The Indian children are different from other poor children, and other children from minority groups. Some of these children are different because they have legal rights under Treaty arrangement. Those without legal rights have moral claims for some consideration, when it is realized that they lack these rights often by "errors in bookkeeping", as one Indian put it. Leaving aside the question of moral right for a moment, the children with Treaty status do have a separate school system by right. This, however, is disappearing as the numbers increase of those admitted to integrated schools. For most of the children today with Treaty status, this option is now no longer available to them. It may or may not be true that federal schools have in the past shown an inferior performance and their graduates have been less successful in occupations off the reserve, * but if graduates of integrated schools perform better in school and after leaving school, is this due to the one variable: mixed classes as opposed to all-Indian classes. There are other variables as well: the quality of the teaching and equipment and the location of the reserve (is it near cities or is it isolated?)

The condition of the Indian in Ontario, if measured by the commonly accepted yardsticks of progress and well-being, is so poor that it is almost impossible to believe that he could have arrived by accident at such low levels of income, health, and educational attainment.

* Dilling examined this question in detail for one group of Indian students but the findings were not conclusive. (Dilling, 1965).

Yet to say that their deprivations were deliberately engineered by the high-minded agencies who have assumed custodial responsibilities leads to implications that are difficult to face. That descendants of men who once occupied this continent, who once ruled themselves, who had a coherent understanding of the world and man's place in it, should be in custody at all requires explanation. The answer that it is the Indian's own fault he stands where he does today is no better than the supposition that he could not have come so low if men had not plotted his downcome.

Perhaps the explanations of such a deep-seated problem are deeply hid in man's murky subconscious, since human values have been so terribly destroyed. It must be that war and the humiliations that go with it, murder and retributive capital punishment, the condition of our jails, the failure of our mental hospitals, all these dark failures in social organization are akin to the Indian question. They bring forth the ambivalences that were evoked by the trial of Eichmann. For then Everyman was in the bullet-proof docket, as Steiner has shown powerfully in his recent writings. He says:

"We know now that a man can read Goethe or Rilke in the evening, that he can play Bach or Schubert, and go to his day's work at Auschwitz in the morning. To say that he has read them without understanding or that his ear is gross, is cant...Moreover, it is not only the case that the established media of civilization - the universities, the arts, the book world - failed to offer adequate resistance to political bestiality; they often rose to welcome it and to give it ceremony and apologia. Why?" (Steiner, 1967)

The impulse to punish and destroy others, coming as it does from man who is also capable of love, poetry and music is part of the human condition. It is part of the enigma of history. Could it be that it suits our guilt better to have the Indian poor and deprived, to have him in a custody so enclosing that even he is unwilling to give up? What would we do if the Indian, who was defeated by a superior technology, his patrimony taken without recompense, his lands shrunken by subterfuge to miserable holdings; what would we do if he had become powerful and influential, if he had proven himself superior

in science, letters, management. Surely it is easier to live with the past when it can be demonstrated that the Indian would have done badly with beautiful Ontario, if it had been left in his hands.

Whatever the true account of debits and credits, the time is here to test the capacity of the white majority to obliterate the past and to reshape the future on humanitarian grounds. Some proposals are offered that are conceived in the light of these assumptions.

3. EDUCATIONAL POLICIES
FOUND WANTING

- (1) A complete education is to be provided for every Indian child for whom the government has responsibility, according to his needs and his ability.
- (2) Close collaboration will be carried out with the provinces to provide education for Indian children in provincial schools, colleges and universities; the transfer of federal schools in reserve communities to public schools where the Indian community agrees to this transfer; provincial legislation to allow Indian children in Indian schools to remain as federal schools.
- (3) Fuller participation by Indian parents in school affiliation between parents, Band Councils and reserve community schools; and consultation between parents, Band Councils and reserve community schools; and Indian participation by Indian parents in school inspection of Indian schools which remain as federal schools.

Educational Policy

- (1) All Indian children of school age to be served.
- (2) All Indian children of kindergarten age to be served.
- (3) All Indians who wish to continue their schooling beyond high school as far as they have talents, ability and willpower will take them to be helped.
- (4) All adult Indians who wish to improve their educational status are to be helped.

Educational objectives

- The federal government has a special interest in negotiating Treaty Indians and does have policies to be implemented by the Minister of Indians Affairs and Northern Development for them. Its current program was recently outlined by the Hon. Arthur Loring, speaking to the National Association of Indians, March 15th, 1967. He states that it is now an obligation of the government to provide Indian education, March 15th, 1967. He states that it is now an association of Indians and administrators of Indian affairs that close collaboration with provincial schools that is now an essential part of federal policy.
- The Ontario government has no explicit policy directed specifically at Indian students. Since it does not distinguish students of different ethnic backgrounds, it is assumed that no special provisions are made for Indians. It is recognized that no course, there is much more official concern among departmental authorities.

There are powerful arguments in favour of this policy, or clusters of policies, which is in effect a policy of equality and desegregation. In this matter general trends in North America today the idea of segregation is redundant. There is also substantial,

If will be seen from the foregoing that the federal government through the Indian Affairs Branch is at the very outset taking a policy of contracting with the provincial schools to accept Indian children in the regular classes as known as integrated schools. Those are regular classes in contrast to federal schools, which are schools in contras to federal schools. Those are known as integrated schools in contrast to federal schools. In almost entirely populated by Indian children. In pursuiting this policy the federal government is "renting" and "buying" services. Legally it has not abdicated its responsibility for the children who are on band lists and are recognized as legal Indians. Those transfers are just one more step in a long trend toward first class citizenship. Already the provincial school has accepted the responsibility for the welfare of Indian children in the federal schools.

(7) The educational programme will be closely co-ordinated with the Development Directorate of the Brahmaputra to ensure that the needs of the rapidly developing Indian community are adequately met.

(6) All federal schools will operate at the provincial standards applicable in their them.

(5) Residential schools will be used only for the pupils.
those primary schools pupils for whom they are an absolute necessity. They will operate under the full control of the Department under regulations established in close consultation with the churches who operate

(4) School curriculum in general schools is to be that of the province in which the Indian schools are situated. Curriculum will be modified only where this is necessary to meet the special needs of

The participation of Indian people on the established school boards where Indian children are a significant part of the school population in providing equality in education.

This is a question that no Ontario educational official will answer officially because departmental policy does not recognize ethinic differences. So far as the department is concerned officially there are no Indians in Ontario. We cannot help but ask how can Indians to the general government, with the long-standing committee - the federal government, with the Indian service. For it is a policy that removes federal services. It has to that of a bookkeeper and lessor of its own role to Indians, justly a policy which reduces mental to Indians, to the Indian service. For it is a policy that removes federal services.

The transfer of fungtions to the provincial government raises other questions about the competence of millionaire business of the Ontario Department of Education, already serving 1,736,781 students, to meet what we believe to be the special problems of the majority of Indian students in Ontario. The Ontario government has, and always has had, a substantial number of non-Indian Indians in its care. It is not unusual for Indians to renting more services from the provinces for Indian children, to ask "How well has Ontario done with its own Indian students?"

During the past decade white children's transfer has been accelerated, the numbers of Indian children continuing into the higher grades has also increased. It has not been possible within the limited scope of this study to establish a cause - effect relationship between the new policies and school attendance as we know such trends may not be causally linked even though it would be compelling when the trend is in a "good direction" to believe that they were. Moreover there are other trends; the total population increase, which is running at 25% per decade, is one. Another friend is the increase in crime and court convictions of persons of Indian origin. We also know that the more Indian children attend school the more Indians will be. The suspect a youth who drops out to grade 10 or 11, than drops out, does not find employment, then drifts back to his native haunts is less effective than if his school attendance is less than half of what it was before he left.

Given if it is not definitive, evidence that those who have passed through mixed schools have a better chance of finding a comfortable place in urban society and in employment. They are accustomed, the argument goes, to mixing with and competing with non-Indians on an everyday basis.

"Even where Indians have the necessary

These teachers doubtless had good intentions - cleanliness, but if intentions are in fact good, there must be absolutely no ambiguity. It is in the child's statement, quoted above, one would wish to find more clarity. Could there be something less bleak than the objective to offer "a complete education"? This is strictly a tactical statement, but what is the strategy? It is easy to deploy troops and arrange manoeuvres and even to win battles, but winning a war is another matter. That is when ideals and goals must be stated. There would appear to be an insufficiently sophisticated approach of the Indian question both in general and provincial offshoots, for one to expect new and substantial gains over past performance. The next section will attempt to examine the dimensions of the problem.

ment, they face widespread discrimination from potential fellow workers as well as from employers. Many firms follow a definite policy (informally or unofficially), where such policies are illegal in terms of provinicial legislation to hire Indians at all, or in token numbers as such discrimination is not against Indians as result of unfortunate experiences with or observa- Indians, in most cases; it has developed as a result of unfair treatment experiences with or obser- an unfavourable stereotype. Awareness among Indians of these attitudes tends to evoke countering attitudes and behaviour patterns that reinforce and justify the whites' judgment of them. And so on, in a vicious circle." (Hawthorn, 1966, p. 55).

4. INTEGRATION AND ASSIMILATION

difficultly it has in dealing with these human variations. bureaucracy and centralized its control, the more bewilderingly complex. For the school, the more states, with a high rate of mobility in a class but in a changing society with many levels of class and socialization are relatively simple in a stable society, education. We have recognized that both education and of socialization will clarify the dilemma facing the It will be interesting to see how the concept

own view of himself and his place in it by the values, definition, directives and controls that are the stuff of the communal setting, supported in his safety of the machine and play and work of other men from the standards watching a game he cannot play. He watches in the stands and of it and of his excluded place in it. He is aware of the major themes that dominate the total society, yet from the Indian who is in large part at that socio-economic level there are still links. The territorial and kinship groupings are by that fact isolated, cut off

In the Lower classes these links with the outside are fewer, less entwining and supportive. For the Indian who is in large part at that socio-economic level there are still links. The territorial and kinship groupings are by that fact isolated, cut off

territories. The school is his instant tuition par excellence. From film, cinema, to press, to churches and free make him feel warmly in that environment. They range A network of instantiations and associations exists to with the outer world which helps to make it integrable. party. The middle class person has many such links as members of a religious denomination, a political party are automobile workers belonging to the unions; others are automobilists that affect other young people, yet and uncertainties that affect heroes, the certainties by the music, hair styles, the heroes, the certainties world. Young people are Indian but they are outside numerous sub-cultures that are linked to the outside cohort, a community, yet continue it each one has a local identity. It is a more or less people near Bradford - each is an understood segment. The middle class Indians of Toronto, the Six Nations sub-cultural values. The Indians of the Kenora region, there is, in each of these a bewildering overlap of differences. If the Indians in one place are examined it is an understood category with wide tribal and regional differences. The Indian in North America is one of these. It

ethnics and religious groupings are also sub-cultures. Little with a certain coherence in values, group arrangement is also given this designation because they are of are consolidated sub-cultures. The Lower classes are for instance, the social classes and the professions related to the whole, but nevertheless less self-cultured. culture. It refers to a segment of a larger culture, and changing society we use the loose term of sub-culture. In looking at the structures of a complex problem. Some other conceptual tools can be used to look at the

directed toward upward mobility. One of the most powerful teachers, and the curriculum and goals of the school are the school on the heights, but it is run by middle class neighbors, it may be less well equipped than to attend a lower class school. It may be in a lower segregated than his place of residence, he is not permitted to upper class one. Whereas the lower class child may be viewed of the lower class child than it does of the upper class society takes a less permissive view of our middle class society.

Differences in clothing, cleanliness, style of speech are external manifestations of deeper differences in belief, outlook on the world, and sense of personal worth.

Indian reserve they too regard with limited comprehension they drive their cars to the school in the sun or the assumptions and presuppositions of the teachers. As to school from a sub-culture that is alien to the to be adequately served. This is because they come to the very large group of poor children if they are schools and teachers must make cultural accommodations even though the war on poverty has shown that the on the other hand, has as yet no such special treatment, are available without question). The lower class, resources for segregation, travel and special treatment school. The numbers to be served are small and the problem but he may have his tutor and his private their values. (The very wealth has a similar segment of our society not attuned to the schools and segment of the Indian child? He comes from a

differences are as well. There is the exception where there are social class differences to the younger people who are psychologically available the relevance of the school's generations tend to reduce the difference between there is little conflict. Even in the middle class dominant segment which created and controls the school, play group in which he is growing up belongs to the school, are taught to the child. If his family and the group, that is to say the segment which controls the school, the underclassings accepted by the dominant school has to do more with training than education.

It should now be clear why we insist that the has been formed.

By the time he is ready for school the foundation of his character has been laid and an outlook on the world

Acculturation in its general sense is the assumption as I understand it of culture through contact, especially with a people of higher culture. Two models for acculturation can be cited, e.g. the impact of the steel axe on the culture of the Northwest Coast. Here a single technological item was acquired without the accompanying

Educators have a word for the adjustment they expect children to make who make this move. It is "acculturation". It implies that the child should acquire the attitudes of a sub-culture different from that of his father and his mother. It is hoped that this acculturation is proposed without taking into account the psychological damage such a separation from parental values is known to make. For the adjustment the Indian child is asked to make is different in kind and degree from those to be drawn from the early writings on the subject.

There is a growing realization that the school should be less rigid in its posture toward persons from different sub-cultures, but as yet a way has not been found except in pilot projects and experimental practice. It states explicitly that no one should be deprived of a middle class education, that it is to say of an opportunity for personal advancement, and implicitly that those who cannot or will not move from the lower level sub-culture from whence they come to the middle that opportunity of the school have an adjustment problem. This's confusion between the massive and powerful school system and the defenselless child and his parents is called equality of opportunity. The drop out rate of all students, particularly of Indian students (see Chapter 11) is at least one indication that opportunities are not really equal, because the benefits are not equally distributed.

North American myths, endlesssly elaborated from the crude Horaatio Alger stories, is the belief that the school is a great leveler. It is the means of moving from rickes. That the school has served this function for great numbers is true, particularly for rural European immigrants living in cities, and for rural children of British and European extraction. But the fact must also be faced that it has not served this function for the abject poverty. (Sim & Findlay, 1965). Nor has the states, or which at least one-quarter are in a state of abject poverty. (Sim & Findlay, 1965). Nor has the middle class school served as a ladder for the Indian population.

with education in its loftiest tradition. autotomy: three broad humanitarian goals fully compatible solutions under the title of equality, accommodation and these lands. The three chapters that follow suggest conditions of the descendants of the original occupants of attempt has been made to find the genesis of this unhappy Indian apathy toward his own fate is simply a mirror of the fundamental question. Yet an answer must be sought, for public apathy is not a satisfactory explanation for largely the failure of the schools, except to account for niggardly budgets. Why the public was apathetic is a deeper more It is the contention of this study that the

failure is more difficult to find. It is the reason for the daisability between these two groups is a measure of the failure of the schools, for which the churches and government must share responsibility. The reason for the daisability of the Indian groups on the other hand are still a problem".

AND

RECOMMENDATIONS

5. EQUALITY

The equalitarian ethic is an important corner-stone of the democratic system. It has been written into various national charters that men are born free and equal. Yet it is what they are born into that determines the state of equality. Are they born into prosperous farms, wealthy suburbs, or reservations and other types of ghettoes? The fact of birth and rearing is a factor of prime importance in determining the Canadian society has never departed fully from the aristocratic tradition on which it was founded, the slogan of equality of opportunity in the school is still about the social realities. The influence of a popular one, despite what the vertebral mosaic has to say about the social realities.

Sentimental performance has been well established by caretakers. They have shown that, the child passes through successive stages of education and training, factors of economic status, colour, and occupation of parent, and even sex become controlling determinants in ascertaining who is to pass into the higher levels of achievement. (Bean, 1966, Davis, 1974)

There is very little criticism of the programmes as such, now current in the Indian Affairs Branch. As stated, they appear well conceived. Moreover, the programme of the Ontario Department of Education, as expressed in its various policies statements, certainly looks good. It is true that proposals will be made here that will depart radically from the present policies as laid down. But these proposals are made, not because present policies - and one would add intentions - are bad. It is because the pragmatics and achievements are inadequate. What is impulsive is the lack of options for those who do not fit the conventional system. The possibility right structure of the provincial educational programme is not precluded in the conception of options is not precluded in the conception of options or four sizes of shoes would be considered archive, but what of a social order that offers so few societal sacrifices to human beings who are so gloriously sanctified options to them in their gifts, interests and qualities of per sonality.

Even if the plans were suitable, there is no subsantial evidence that improvements in effect or on the drawing boards will take place with the speed which the situation demands. The present policy of equality of opportunity is not enough. If two laps behind my opponents in a race, I must do more than go at the same speed, I must overtake them.

In a summary of a number of recent studies carried on by the University of Syracuse, (Carnegeie Corporation, 1966), it is pointed out that much more money is now being spent to educate the children of the middle-to-do than to educate the children of the poor.

But this review points out, "Every shred of available evidence points to the conclusion that the education of affluent children are far greater than those of affluent children. By any measure one wants to use - pupil performance on tests, dropout rate, proportion of students going on to higher education, the output of the schools in the depressed areas of the cities (of the United States) is very much poorer than that of the suburbs. There is little reason to believe that even to equalize treatment would begin to close the gap. To achieve the subsistence rather than merely the theoretical form of equal education opportunity requires the aggregation of available funds to treat the Indian differently. The arrangement against differential treatment is based upon equality of grounds. He is not treated differently because he is an Indian. Rather than compromise a principle, even a specious one, let him fail. They do not want to single him out. If he is retarded they will treat him as a retarded child. The point is that a line year old boy in an integrated grade I class in which is assumed a normal age for those two grades, are compared to those who are above age 7 and 14, it will be seen that about 30% of the boys are too old. (A few cases the situation at grade 1 and grade 8 can be compared. When children of ages 6 and 7, and 13 and 14, tables in Canada and Ontario. Indian Pupils Enrolled in Federal Schools in September 1965
 for Canada and Ontario, by Age, Grade and Sex.*

OF SPECIAL interest are the scores for Girls
 in Ontario where the age rotation is smaller in
 grade 8 than in any other category.
 In grade 8 the age rotation is smaller in
 than in grade 1 from about 1/4 or more to about 1/2 or less
 in grade 1. Second the rotation has moved
 to 297 in grade 8. Second the rotation has moved
 while for Ontario there are 1,142 in grade 1 as compared
 children are in grade I and only 1,320 have achieved grade 8,
 do we find in grade 8? First there is a fantastic loss
 of numbers. For Canada as a whole 5,061 Indian

What the record is for Indians in integrated schools in Ontario, we do not know. Neither Ottawa or Queen's Park have any data. They simply count heads or, should we say, bodies, and pay so much a body. It is difficult to prove a policy right or wrong if there is no data. There is reason to believe that there is more age retardation in integrated schools because large numbers are brought to larger centres from isolated areas. If this is so, the dropout rate could also be higher.

In Ontario agreements for accepting rejects read out on an ad hoc basis between Canada and the local school board. As yet there is no general agreement between the two senior governments. In a great many instances Indians educational opportunities equal to those given Indian students, and in a non-Indian milieu they have of white students, and there is a great deal of racial segregation in itself is no guarantee that benefits the Indians to educate Indians racial minorities. However, granted equal rights to educational facilities, Indians of all ages benefit greatly from the education available barterers, and have crossed previously insurmountable barriers, and have shown the potential of the Indian population. Until recently there was little opportunity for Indians to obtain an education as it should, or in accordance with the ideals stated in the official

In spite of these negative results, a number of young Indians of special ability have crossed previously insurmountable barriers, and have shown the potential of the Indian population. Until recently there was little opportunity for Indians to obtain an education as it should, or in accordance with the ideals stated in the official

Even where living conditions have not been propitious, it is possible to obtain to academic achievement as well. Now ability in sports and art have been most recognized. Potential of the Indian population. Until recently there was little opportunity for Indians to obtain an education as it should, or in accordance with the ideals stated in the official

In spite of this there is a great deal of education available to the Indians, and there is a great deal of opportunity for Indians to obtain an education as it should, or in accordance with the ideals stated in the official

Indians of this are: general academic retardation and dropouts and the Indian students as do the white students. The same opportunities as do the Indian students do not benefit as much from the education that the Indians receive to the Indians, and there is a great deal of racial segregation in itself is no guarantee that benefits the Indians to educate Indians racial minorities. However, granted equal rights to educational facilities, Indians of all ages benefit greatly from the education available barterers, and have shown the potential of the Indian population. A foundation called the Indian Council of Ontario should be established to make it possible to set up instantiations, support projects, sponsor objective research and foster leadership. The Foundation would be controlled by a board of trustees and on its own behalf. It should also work largely through private groups, though it might sponsor directly experiments and demonstrations.

(a) If the federal government did support this council, some of its present activities would be handled by the council, such as college scholarships. Under the council, non-treaty Indians could be treated with equality.

(b) If the federal government were to a body which would be enlarged upon under the charter of autonomy, but admitted it to the inevitable hedgehog and caution that interdependence, and the inevitable hedgehog and advantages too. The entire operation would be relatively free of political interference, and the inevitable hedgehog and caution that unforseenately accompanied the risk of direct accountability to a legislative body. There would be independent accountability as for crown corporations, and at stated intervals when requests are made for additional funds.

The council would sponsor undertakings that were contrived, and risky. It should be ready to back new ventures, above all, be prepared to back promising Indian ideas the efficiency of which has not yet been established under the great Dr. Keppler.

For those interested in making application there would be less reluctance to accept help than there is now in accepting governmental assistance. As illness or loss of honour, assistance from his parents for travel, a subscription to a concert series, and an extra year at college. These funds should be accepted in the same way by individuals and organizations.

The majority of board members and officers of the council could be persons of Indian inheritance.

An Indian College - A centre for "popular education", as it is conceived in Europe, would give form and meaning to the aspirations of the Indian people. It would provide the means of advancement into positions in industry and public service which Indians could fill. It would be a symbol of the new day, as the tomahawk and spear are of the long gone past. Possibly this centre could be set up under the college legislation. There would then be a college Indian names as well as a number of colleges with Indian names. But if it appeared that there was likely to standaridization under community college structure, then alternative alternatives should be sought.

#2 Preeminent Attion

With the support of the Council two major established institutions should be set up under separate boards. Besides endowments they would appeal to private sources for gifts and for the usual government aid available to such bodies: the first a centre for popular education, the second a centre for advanced study.

Lake - an indication how quickly they can move ahead. Through the number of married couples admittance are restricted, this pilot project shows what can be done.

Others who could qualify for admission else-
where might feel more comfortable with their own people.
This should not be thought abnormal. Some graduates from Upper Canada College go to Trinity College and then join the same fraternity as their U.C.C. classmates for the same reasons. Yet some of their classmates would think remaining in this protective environment too limiting, and would go elsewhere. There is an option for those who are not ready for the hurry-burly, and this is precisely what many Indian students need. The main point to be made here is its need for a centre environment as they experience the excitement of intellectual growth. If the integrated school accom-
plishes its stated goals, there will be less need in a generation for a centre of this kind, but the Indian community has not had that experience. He needs his own centre and he needs it now. Meanwhile we await the result of the policy of integration.

The community colleges seem to be concentrated-
ing on technological training whereas this college should be stress-
ing on traditional values. If it were located in the north
(an admirable idea if a centre can be found sufficiently
hospitable to a large influx of Indian young people) then
one or two technological fields might be stressed. Wood-
craft, conservation and other wild life occupations
might be grouped to make a specialty which will for
some years to come continue to attract Indian recruits.
Since the student body should not be exclusively Indian,
non-Indian students could also attend.

Cultural values should be stressed, along
with emphasis on decision-making. Student planning
and control of certain aspects of life in the college
community is urged. At some point paternalism
must cease. There would be no better place for this
departure than in the shelter of an Indian College.
The Indian students, who may have found attendance at
mixed schools a threatening experience, would benefit
from a deeper understanding of the Indian situation
at this centre.

The key criticism of present arrangements is that Indian students have too few options. If a student can not fit into a conventional high school or vocational school his only option is "back to the reserve", or to low status employment in cities. For those who fit in, the present system is Good, but today a vocational student with capacity who can not adjust to established institutions, many middle class children drop out for a few years, are supported by their parents as they experiment with alternatives, later go back much the better off the break. Poor children and Indian children of poor parents cannot be carried in this way. It is easier for them to accept a label of misfit and failure. The Indian College just proposed to one new option, but it does not offer elementary and high school training.

Options

located on the campus of one of Ontario's major universities an institution should be established on the scale and style of Massay College. It would be a replica of rare documents, records and artifacts relating to the past. It should also maintain a good library and clearing house for information related to contemporary times. It would serve students of history, linguistics, ethnology and modern culture, and a system of residential facilities, research supports, and a system of grants and bursaries. While it might primarily serve scholarly interests, it would be open as well to generalists and visualists, and journalists in all the media.

An Indian Cultural and Research Institute

* The Canadian Welfare Council has recently completed a study on this subject, although it has not been released by the Minister of Indian Affairs and Northern Development. (See George Caldwell, Indian Residential School Study, 1967.)

Judging from our knowledge of family situations among the poor families, a wide range of * problems can be expected which are now largely ignored.

The very old student, say a nine-year-old boy in Grade 1 should not go into an integrated school. He should be placed in a small private residential school operated by a highly trained, and completely independent professional group. Such a child should be ready after one, or at most two years to enter a regular school among students at his age level.

We have not analysed the range of services required but one comes to mind. This has to do with the average Indian child in public school. The table on page 81 demonstrates that this is a very large group.

Under the clause in the Indian Act which empowers the Branch to contract with private and religious agencies to carry on education, it is suggested that private or quasi-public corporations, created especially for the purpose, should be engaged on a 5 year contract to set up special facilities. They could be residential, on reserves, or as adjuncts to public school systems, depending on the project. Wherever possible these contacts should be arranged jointly with Ontario so that non-Treaty Indians and others suffering similar cultural disabilities could be admitted.

It is assumed most school boards cannot provide these services. But it is required that the imagination and resources to meet the special emotional or psychological deviancy. Those school boards is cultural and should be treated as such, not as

* If federal schools are superior, the policy of closing them out is difficult to explain.

through its inspection service, the Ontario Department of Education should identify in whatever ways are appropriate the location of its regional schools and should make known the nature of its recommendations to up-grade them. It appears natural wage standards imposed by the Civil Service Commission of Canada are not sufficient to compete with most Ontario Local school boards. This problem should be the subject of joint discussions between the two governments. At the same time other factors that are the cause of inferior performance in federal schools of Ontario should be brought to light.

Equality in Federal Schools

5

In one area alone no full assessment was possible: the extent to which federal schools are inferior or superior to provincial schools, the range of excellence and inadequacy within federal schools. The Hawthorn-Tremblay study will be heard from soon on this matter. Nor do we know how speedily federal schools will be closed out. One federal official thought they might have disappeared within ten years. Even though this report is directed to the Ontario government, the performance of federal schools is an interest of the Ontario people and its government. Since students from these schools move into Ontario communities as citizens and employees, the condition of their education be a matter of indifference to Ontario.

Along with approval of the policy and acceleration of existing arrangements it is proposed that the secretariat within international arrangements for those unable to move and the scarcity of options for those who are implemented such, (only the methods by which they are implemented) be have not criticized existing policies as possible: the extent to which federal schools are inferior or superior to provincial schools, the range of excellence and inadequacy within federated schools. The improvement of federal schools is a matter of concern - Tremblay study will be heard from soon on this matter. Nor do we know how speedily federal schools will be closed out. One federal official thought they might have disappeared within ten years. Even though this report is directed to the Ontario government, the performance of federal schools is an interest of the Ontario people and its government. Since students from these schools move into Ontario communities as citizens and employees, the condition of their education be a matter of indifference to Ontario.

(b) Changes in Existing Arrangements

* This letter later is not recommended since these experts should be free to analyze and criticize official policy publicly, as well as the publications and utterances of their colleagues.

It is of the utmost importance to prepare teachers to meet effectively children who come from different economic and ethnic backgrounds than their own. In addition to general preparation for cultural differences, special attention should be given to some information about the Indian in Ontario, just as it is hoped they are prepared to meet immigrant children, and children from immigrant families.

Teacher Training

The federal government should provide financial assistance for research in Indian education to be administered under an independent agency. This agency should publish material on Indian education in a quarterly that would make its own contribution inter-

national to knowledge. Similar services in the provincial government but would help the provinces establish their own services. Teacher training institutes, school board conferences, and the like. They would not be a subsitute for meetings of educators to give technical assistance, affiliates and workers in development and to provide financial department be available to education districts in Indian society, ourriculum enrichment on matters related to Indian culture, past and present. These experts teaching English as a second language, culture contacts, would be a valuable service to education districts in India. The fields covered would include linguistics, mental. The department of Indian Affairs and workers in development or 10 year contract, or a separate division in a 5 or 10 unit versatility, or a firm of consultants separated from routine government local work, either as an institution in a unit versatility, or a firm of consultants to maintain such services itself. It would be likely to maintain such services itself. It would be high level of specialized education that no provincial government would be able to manage such a service on Indian education which would be off such a

The textbook, and supplementary reading materials, is another area where improvements could be made. A study of four books now used in the city of Ottawa appraises in chapter 10. This short report suggests the need for new materials (written and visual) to treat the presence of Indians in Ontario from two points of view (a) an objective assessment of the take over of this territory, and of subsequent events leading up to the present. The Indian

freedom to be inventive than is exercised in most schools. Our impression is that the present curriculum permits more encouragement of creativity in the classroom. It is type of different school advantage which would be the salaries become standardized good teachers will seek this needed to set their own standards of excellence. As be allowed (and should be willing) to invest the effort now the case. A school board and its superintendant should departmental and unitary imposed standards than is moreover we favour, in principle, much more freedom from more on areas where quick returns could be realized. In curriculum are made slowly. So we have constant readjustments. It is a highly technical question, and changes been impossible to help the adequacy of the presentation in curriculum to help the adequacy of the presentation in the short time allotted to this study, it has

recommendation

#8

A new Ministry of Education would give leadership and provide technical supports for these changes.

The efforts now in progress in the University of Alberta at Edmonton, and of Saskatoon at Saskatchewan should be studied in detail before beginning similar undertakings. (Renaud, 1963).

For those who have Indian children in the classroom, and those already in service, and particularly for those who have Indian children in the classroom, summer school courses and weekend institutes should be offered to prepare other approaches are needed. Summer school courses and weekend institutes should be integrated into the preparation of teachers for work in integrated schools.

* The Northern Corps Service, a project intended to assist local schools in the north with limited resources, has recently been organized by the Ontario Ministry of Education. This service assumed its duties in January, 1967. See Metropolitan Toronto, plus bonuses. A director for the local service will be appointed this year. There is careful selection, and pay scales based on additional effort to serve well this year. Thirteen teachers were appointed last year, and an additional eight to serve well this year.

Recent legislation by the Ontario Government has isolated groups not yet served by schools. It is apparent that the Northern Corps should receive good beginning which could in time be extended. However,

The Northern Corps Service is undoubtedly a

Mobile Teachers

10 x e c o m m e n d a t i o n

Where there are isolated or nomadic groups some entirely new approaches are needed. The methods used by Frontier College and by Operation Head Start might be taken as models, with modifications to meet local conditions.

To force children to attend a regular school disrupts the economic life of the parents if they give up trapping to be near their children. It disrupts the family life if they give up their children. Besides these adults are carrying on a useful economic function. A mobile teacher would learn to communicate in the native tongue. His basic approach would be to teach rudimentary literacy skills to the whole group, adults as well as children. More intensive work in English could begin in due course with the children. This would be good for this type of work.

They would be throughly familiar with at least one non-Indian person, and a teacher. As trained Indian personnel becomes available, they could be recruited to go to school they would know some English, and help more adequately. By the time they were ready normal school setting. Then younger children could be prepared older children for movement out to a more non-Indian person, and a teacher. 6.

ACCOMMODATION

This chapter is devoted to a prospect of "fraternity", of "listening and responding", of bringing two parts together, integration in the real sense of a sociological concept that was borrowed from ecology, to express the thought that are in conflict can make adaptations to each other in a satisfactory way. Accommodation is the process by which the new equilibrium of forces is effected and maintained,

"Councilor" is needed? We think it is. This school trustee by saying "It is good to hear the other side". He did not say he agreed with all that had been said. It was the opportunity to hear that he appreciated, yet one asks why he had to travel to Saskatoon to hear from people he had lived with all his life. Is the contact so deep "a marriage to them mere criteria".

At that conference I talked to a school trustee. He had grown up near an Indian reserve, now his school was serving Indian children on contract. The speakers at the conference had all been Indian or Eskimo. They frankly expressed their views of past and present education in arrangements for their children. Most of all this conference spoke of the refusal of the majority to listen. *

To such overtures the majority person is at a loss to know how to put his case, for what he wants even more than redress of wrongs is to know those in the majority will listen and know how to respond. At a recent conference on Indian education several Indian speakers spoke of the majority to the conference on Indian education on several occasions that they had known how to respond.

In the centre of the range, perhaps the nadir of them all, is the experience of being totally ignored. The arch inquiry "we might do something for them, if we only knew what they want" is a willingness to respond but an incapacity to understand, and it can hurt as much as any other hurt because it opens the door, then closes it before any satisfaction can be gained.

There is an extensive repertoire of humiliations to which members of a minority may respond with varying degrees of anger and despair. They range from brute force, where physical hurt is intended and sustained, to the uncompromising sympathy of intent well misshapen.

a preventive nature.

See Hawthorne, 1952, for recommendations that were made (and officially ignored). respecting the Doukhobors in British Columbia. A timely lesson is to be learned here. Studies following the riots in Detroit produced many recommendations of

Since the articulation and jointing of groups in conflict seldom occurs alone without planning and preparation * it is suggested that a series of arrangements can be made to bring these accommodations to pass. The resulting social organization will provide

It is in the nature of minorities that conflicts deepen their tenacity and strengthens their leaders, particularly its radical leaders. (Gordon, 1961, and Alter, 1967). The intensity for accommodation, therefore, contrary to popular belief, must come from the more powerful of the two adversaries. This is not war, it is human relations.

An obstacle in removing differences between a minority group and the majority is that the partner-ship is unequal. There may be language difficulties at times, food, cleanliness, dress, attitudes toward work, differences in behaviour, dress, attitudes toward work, it pays any attention at all, can be expected to set up proceedings to change behaviour of the minority. The directives usually come from afar. A local school inspects or an Indian agent, or a missionary may have made accommodations to these differences but our bureaucracies do not listen well to men in the field, especially when they disagree with policies and directives. The pressure of bureaucracy to these differences may have been directed to change its organization. It is a conflict between the totalitarian society that a minority can be "put to the sword", and even then their capacity to persevere and endure is almost unlimited.

attitudes rationalized, redefined or transferred, following a period of conflict. (Dawson & Getty, 1935). The presence of conflict is recognized, and the differences which exist are brought out into the open. Sometimes the causes of the difficulty can be removed, but this is not always possible. Where this is so, an honest understanding of the immovable objects may reduce their emotional content. Conflict can be a nutrient. (Gosse, 1956)

See Sim, 1966. This is a book Length manuscript under the title Community, a Strategy for Action which is still in draft stage. The "Community for Action" is a draft in itself. This is a book length manuscript under the heading of Group autonomy, our liberal democracy is due a serious survival than have Indian reserves, and ethnic pockets in the slums. If opting out of the material benefits of the twentieth century is the price of personal and group autonomy, our liberal democracy is due a serious powerful private, communal, and governmental bureau-

crossed as a means of bringing strength and pride to the people where they live, and as a counterfoil to the craft stage. The "Community development" idea is dis-creates that have all but destroyed community by life. In this report affluent suburbia has shown less strength of survival than have Indian reserves, and ethnic pockets in the slums. If opting out of the material benefits of the twentieth century is the price of personal and group autonomy, our liberal democracy is due a serious powerful private, communal, and governmental bureau-

The strategy of fostering and enriching a minority in the status of Indian is a much larger subject than can be treated here. The proposals grouped under the heading of accommodation merely suggests the direction that should be taken.

So far as the policy of Canada and Ontario are concerned the two words are mistakenly used as synonyms. It is true that Canadian society has not been hospitable to cultural separation at the level of education. Roman Catholic separate schools are an abrasive exception. But many minorities that are compactly settled, or that have rich cultural tradition to be integrated, as an entity could be an increasing source of strength and pleasure. Yet it is growing as a source of embarrassment, when it politcally powerful, and geographically scattered, living complex. The Indian minority is economically weak, block factory is integrated into an automobile manufac-ture-block culture to maintain their identity. There has been a solid wall and a powerful tradition of leadership have been able to maintain their identity. But many minorities that are compactly settled, or that have rich cultural tradition to be integrated, as an entity could be an increasing source of strength and pleasure. Yet it is growing as a source of embarrassment, when it politically powerful, and geographically scattered, living complex. The Indian minority is economically weak, block factory is integrated into an automobile manufac-ture-block culture to maintain their identity. There has been a solid wall and a powerful tradition of leadership have been able to maintain their identity. But

so far as the policy of Canada and Ontario are assimilation. (Sim, 1958) It is obvious now, after all that is known about the schools in Ontario, that present policies in no way reflect what is understood by integration. In the past, statements made by successive ministers of citizenship and immigration have pointed proudly to the fact that Canada did not operate a melting pot, and that various minorities were encouraged to maintain their cultural identity. Integration was used as an antonym of identity. Integration was used as an antonym of

the supports that are needed to maintain communication between Indians and non-Indians.

The school boards of Ontario, their officers and trustees are now under contract with Canada for the services to Indian students. There is more than a hint in our investigation that many school boards enter into contracts for their capacity to deal with Indian students. There may be many schools that select and evaluate of school buses, or other material costs as the route and side is not always considered as seriously as the running of these contracts for pecuniary reasons. The humanitarian service to Indian students. There is a hint and teachers for their capacity to deal with Indian students.

e e o m m e n d a t i o n

The question of salaries and other forms of compensation is the concern of teachers organizations, and the salary scales for teachers in federal schools, in Ontario must have a relationship to general standards. In this regard it is recommended that arrangements should be made for portableity of pension between Canada and Ontario teachers, pension funds. With equal pay and portability of pension, equality between the two systems could be achieved more quickly.

#12

e e o m m e n d a t i o n

In these and other ways that would evolve the teachers, organizations could give leadership to the public in general, and to the Indian Affairs Branch. Education, and the Indian Affairs Branch. In the use of Indian mothers as teachers, aids, and look after experimental basis. Finally they could encourage on an experimental basis. They could sponsor a model school project in the North American Corps. They could foster a wide spread interest in the studies. They could small intensive research projects and policy language as a means of enriching classroom experience. Especially at the possibility of recognizing the native the use of Indian mothers as teachers, aids, and look the use of Indian mothers as teachers, aids, and look especially at the possibility of recognizing the native language for conferences on Indian education, could sponsor week-end conferences on Indian education, with some of the proposals made in this report. They teachers, organizations could experiment in various ways teachers; associations of Ontario. It is suggested that teachers; associations taken by the Federation of Women notably various actions about the Indian question, in Ontario are seriously concerned that teachers, organizations

The recommendations that follow do not preclude the conventions: broad-based weeks, interestroup relations seminars, film and television productions, radio programmes. They all have their place, but they are fitting on the cake. More fundamental changes are

Indian.

There are three main areas, each with its own reverse elements: professional, non-governmental and

follow suit. From any sector. Wherever it originates others will come but a many-sided approach is needed. The initiative may change attitude. Governments can encourage such efforts as a campaign to government cannot of themselves launch a critique of causes and effect which must be broken. Yet inhabitants and blocks remedial action. There is a vicious same time the disparity of the Indian groups Indian community is an effect of public neglect. At the with low priorities. Apparently and alienation in the action, low budgets, and poorly conceived projects public Indian preference will result in sluggish palliative unless public bringing about the changes that are needed. An alert and informed public made in this study are not likely to be adopted on the scale and with the speed required to be adopted on the scale and with the speed required

Public Option

(4) sponsor institutes and workshops for school trustees and superintendents for exchanges of experience and study of principles in Indian education.

(3) request detailed research into the performance of Ontario schools in their work with Indian students, and

(2) institute special ad hoc training for teachers and administrators

(1) press for legislation to give Indian parents with federal contracts offical representation on any school boards

It is suggested the school boards should

Genuine commitment to the unusual opportunity these contractors provide.

- * For an elaboration of the viatemperant expressed here
- see my paper on the role of information and education in pollution control, Proceedings, Conference on Pollution, Canadian Council of Resource Ministers, Montreal, 1967.
- ** Contracts Let by Ontario Hydro and the Department of Highways should be examined as well as living conditions around stations around construction projects.

The non-governmental groups include a very wide range of interests, some of which overlap with the professional and occupational groups listed above. It is recommended that these groups should re-examine their active educational programme within their own membership. This would include churches, medical societies, bar associations, trade unions, contractors and business organizations, women's associations, welfare councils, service clubs, associations of Indian people who use or could use Indian personnel. *

15 x e c o m m e n d a t i o n

Some action has been noted already but more is required. Indian studies of attitudes of these workers and our recent procedures in handling Indian cases and programs should be planned. When efforts of this type are carried on, the same organizations will be able to exert powerful leverage on governments, churches, employers, landlords and other sectors which are traditionally involved in policy formulation.

On the basis of these findings in-service training be for each group to examine its own performance and be cases and programs with Indians. The strategy should be adopted and programs with Indian workers and our recent procedures in handling Indian cases and programs should be planned. When efforts of this type are carried on, the same organizations will be able to exert powerful influence on governments, churches, welfare councils, municipal governments, trade unions officials, welfare officials, and school administrators, police and court workers, agonomists and those working on AIDA projects, educators public health workers, energymen, medical personnel, lawyers, sociologists, social workers, teachers, accountants, public relations to prepare for and facilitate change. Indian work should take the initiative through their own organizations to prepare for and facilitate change.

14 x e c o m m e n d a t i o n

needed which cannot be spelled out in detail. The following are little more than clusters of suggestions that will be part of a massive change in public opinion, to private behaviour, and institutional performance.*

No specific suggestions will be made to Indian organizations, most of which are still only in the organizational phase. It is sufficient to point out that the disappearance of paternalism will only come when strong leadership and spokesmanship matures itself in the Indian community.

Many of the proposals made in this study are aimed at encouraging Indian leadership among Indians beyond all this, all-Indian organizations must develop to shoulder the main burden of speaking for Indians and to act in their behalf.

acting in their behalf.

Z. AUTONOMY

In Hawthorne and Tremblay, 1967, Part I.

* For a detailed, subtle and new appreciation of the Legislatives of the basis of the reserve system, see Prof. Cairns' contributions

reserve now serves as a hiding place and a refuge. It must begin to serve as bases for autonomous living. The far as one can see ahead. They could cease to be ghettoes, are here and will so continue, however much repretted, as impecable founded on of his tenue.* The reserves groups, with the possible exception of the Franco people in Ontario, as contrasted with all other ethnic plan. The outstanding fact of the status of the Indian Any plan for the Indian that neglects the "de jure"

precedents as quickly and imaginatively as possible. And tensions, proceeding on trust, striving to create arrangements we envisage must be full of contradictions society which we claim to have in Canada. The human this is the minority can live in an atmosphere of multiculture, polyethnic. Where the minority can live in an atmosphere of autonomy. It is essentiality between a minority and a majority to a place of interaction to move forward from a condition is independence lost when group participation is increased? Is it possible to have freedom and still accept responsibility? Questions, the usual paradoxes - Will they be happier then? of autonomy, it is important to avoid the usual fruitless In attempting to find a sure pathway to a condition

autonomy the way to freedom. This is the Indian chooses to make must end. It will only end when the Indian chooses to make this is the inevitable impasse of the custodial relation. It within a limited range of options, but he can do so suddenly. He cannot move or speak with freedom. He must co-operate frame work of the reserve system. Within that confined space this independence by impecable withdrawal into the custodial Ontario? The difficulty is that the Indian now must maintain personal independence than the middle class in community. Who can say the Indian is much farther from this autonomy. Who can say the Indian's right to self-government, remaking imprecious to mass pressures, yet be well socialized persons who can exercise a full measure of environment, capable of selecting what they prefer from the needed, come the target of any major plan. Autonomous persons are directed, and other directed types of the present) should be David Reisman's hope for the future, to replace the inner (David Reisman's hope for the future, to replace the inner culture and legal heritage. Autonomous persons, inhereent in the democratic system but in a way peculiar to to seize and exercise the freedoms and responsibilities

r e c o m m e n d a t i o n

There are many able and capable Indians of adult status who are held back from positions of responsibility. As the requirements for education increase, more and more work is available, that they should send their children to the total environment in which Indian children live. It is not enough to tell parents an education is own living experience. What other possibilities should be emphasized, following the guide lines established for placing immigrants from Jamaica. (See an article in Citizen, Dept. of the Secretary of State, Dec. 1966.) In addition, the members must realize this in their school. They themselves must realize that it is valuable, that they should send their children to the total environment in which Indian children live. The Indian persons are automatically depressed. The low collar occupations increase, more and more work is available, that they should send their children to the total environment in which Indian children live. It is not enough to tell parents an education is own living experience. What other possibilities should be emphasized, following the guide lines established for placing immigrants from Jamaica. (See an article in Citizen, Dept. of the Secretary of State, Dec. 1966.)

(a) Personal Advancement

Proposed Action

The action visualized, therefore, must move the reserve system rapidly away from its present state of paternalism and dependence. The instant tactics on the Indian control. This must be accomplished under reserve, and related to the reserve, must come under another who the man's tribe.

Even though they may never choose to return except to personal and group mythologists of most North Americans, the function of a homeland enters largely into the for its members, as does Israel for many Jews. Indeed small Indian band should serve as a physical presence become a proud homeland, a Zion. The reserve for each

If the Indians accept a paternalistic regime, they are charged of doing, if the Indian Affairs and Northern Affairs Branch operates towards them paternalistically, it would appear the two are partners in an unremarable scheme. Yet the Indians must not be cut off from involvement in the Indian people and Ontario Governmental terminates. It must be succeeded by others no better, but rather to relax their control willingly to communal groups, especially to Indian band councils. If these assumptions are well founded, then the Indians must struggle for independence. In the struggle they must be autonomous and truly acquire their citizenship.

(b) Political Action

The agency would maintain an educational programme for supervisors, personnel officers, shop stewards, so as to reduce disabilities or unemployment among persons who had benefited from its work. The staff of the agency should include persons who had been educated from its work. The arrangement for part-time employment of mothers in day-care centres, kindergartens, and even in integrated nurseries, so as to encourage participation in day-care centres, kindergartens, and even in integrated nurseries, would be brought into effect here, particularly in principle of "high-class as well as high-status ones. The extend to low-status as well as high-status ones. The programme envisaged here would eventually schools.

This registry should be adequately funded for five years to cover staff requirements, as well as resources to support the costs of additional education.

The registry would procure community services from employers, including government ones, to place Indians in positions where rapid advancement could be assured. Positions would be opened up where education would be followed by adequate support and close liaison between workers and employer. When the former's position has been assessed, then a series of appropriate training opportunities should be arranged.

This registry would begin slowly with complete files on a selected group. It would provide consulting services with advanced momenta. On the basis of experience the registry would be rapidly expanded.

Todays an unhappy situation exists which debars Indians on reservations from exercising the traditional prerogatives available to other Canadian to share in the control of the education of their children. Changes in federal and provincial legislation are required to allow elected Indian representatives to sit on school boards. Information received indicated that the Legislatives in Toronto and Ottawa could expect proposals to modify the present arrangements. These changes should allow members of any bands whose children attend a private school on contract to elect representatives to the board responsible for their school.

The training of band counsellors and band administrators, now handled by the Indian Affairs Branch, should be stepped up, but it should include more attention to providing initial administrative matters, and it should be stepped up, but it should include more cultural stresses, along with strictly administrative matters, such as to help them to understand the democratic process. A way should be found in devising these courses to help Indian leaders to understand how to be responsive to the electorate to whom they are responsible. There is no better way of learning than through direct experience in these training sessions.

But such a haphazard outcome may not be the best of all ways of learning political action. Surely the mandate of educating a people, hitherto incapable of terminating this state of dependence, should include orientation and experience in political action. But there is slight likelihood of Ontario public schools, or federal Indian schools preparing children or adults to win this struggle for autonomy. There is little evidence that students anywhere (except in some nursery schools) are asked to share in authentic decision making. However much we would wish state operated schools to train militiamen leaders, the chances of this happening are small.

In our view, repetition held, experience and training in political action must emanate from sources other than the school.

(b) members of Indian bands whose children attend federal schools would elect members to a duly constituted school board.

PART III: SUPPORTING

DOCUMENTS

6. BACKGROUND INFORMATION

ABOUT THIS STUDY

In December of 1966 Straatham Aboriginal Association entered into contract with the Provincial Government in Ontario to provide "a report with recommendations on Indian aims and objectives of Education in Schools of Ontario". In a memorandum from the Committee entitled, "Programmed Education in Ontario", Terms of reference were provided in a memorandum from the Committee entitled, "Programmed Study of Indian Education Program"; these terms of reference having been developed by a committee of the Provincial Aboriginal Education Program", the term "Province" was equated to carry out扶助 Indian research and development interest in stimulating association of Indian and Eskimo Association of Indian education, the Indian-Eskimo Association and its continuing interest in stimulating Eskimo Association of Indian education, the Indian-Eskimo Association and discussions with the Provincial Committee, not only in laying out terms of reference for the study but in helping two meetings for sole purpose of considering the study, and provided the author with valuable help in laying plans for the study and subsequently in consulting a preliminary outline of this report. The Indian-Eskimo Association committee members have been helpful in many ways.

It would look at Canada's historical record in its hand-government for instance would examine necessity to be selective. A Royal Commission for instance would examine limitations of time and budget it will be

See Hawthorn, 1967. This first volume touches mainly on broader political and jurisdictional questions.

It is as it educate nation for Indians were a manastion which these people were to live in and enjoy. We find the manastion is already built and it is grand and good in a great many respects, but the Indians are uncomfortable about it. It needs some changes to suit their style of life as does any edifice built by another. So it

Addition of new faculty made it mandatory to treat the subject in this way. An important book has just appeared under the authorship of officers of the Indian Affairs Branch of the Education Division of the Indian Affairs Branch (Waller, 1965). Besides, the Hawthorne-Tremblay (Waller, 1965) report which is about to appear will have a large section on the education of Indians. We did not have access to the unpublished material, although we talked to some of the authors and had privilege to access to the first part of the education report. When these documents are published, a summary and critique should be published to be used by the IIA in workshops on native education along with this paper, Waller's, 1965, and other documents of this nature. In consideration of these other resources, this study has paid less attention to "the historical and analytical evaluation of Indian education", and somewhat less on records of memorandums and technicalities than an integrated in our memorandum of December 20, 1966. There has been more emphasis on mendations and techniques than an integrated in our memorandum of December 20, 1966. There has been more emphasis on principles by which a minority people can come into a state of true equality.

After investing time in the subject more fully
in the first months of the study it became more evident
that more attention should be given assumptions about
the education task the federal and provincial government
ments were under-taking for Indians. Still more was
it necessary to look at the underlying process of
growing up in a minority group.

useful to the committee; it would be more implemented, and it is more practical, more manageable within the given limitations.

The first one would require much more scholarly work which is slow if it is done well. I doubt if it would be possible to do that type of assessment adequately in the time permitted.

The second choice would be less systematic but more likely to come up with some imaginative solutions. I think too this proposal would suit Phase 2 and 3 as suggested by the Indian-Eskimo Association.

Finally there is a creative and personal reason why the report has taken this shape. It is not a research document: time did not permit original research, though some reconnection is in the field was possible. It is rather an essay written by someone who is deeply concerned, as a Canadian and as an educatedator with a sociological viewpoint, with the topic of this study. The smaller book, and the Haworth and Tremblay studies have had very large resources at their command in preparing their publications to the light of day. This report is a one man effort. It may be that Tremblay's studies have had very large resources at their disposal for optimum results. Convalescy it may be that our feelings for the broad, essential elements of geriatric gerounds for optimum health are not been encumbered by a plethora of detail, and that our disengagement of reality is close to the mark. Be that as it may be, we are less hopeful than other writers appear to be the present policies and present trends are going to yield the results that are hoped for. This report is more pessimistic, for the reasons outlined above to be proved wrong, and to be shown in the happy outcome to be proved right. It would be a concession as an antidote to what are considered mistakes in practice, or inadequacies in policy. It is a happy outcome of time that this pessimism was misplaced and fulfills its purpose.

needs remodeling and enlarging to suit them. Where is the key? This above all is what we have sought to find: how can the Indian people possess this mansion and open wide its doors so that they may possess it and cherish it for themselves.

9. WHAT IS AN INDIAN?

list. to be listed officially as Indians on a federal band as British in the census, and for full-blooded Caucasians possible for a nearly fully blooded Indian to be classified as certain legal status. The second is a citizen of Ontario or no special legal status. The designation has certain legal obligations. The second is a general legally recognized person to whom the federal government two are designated Indian and Metis. The first is a the vermicular of the government administrator these are on a band list, and there are non-treaty Indians. In are registered or treaty Indians, persons whose names but there are two ways of cutting across the group: there within this aggregate there are many subdivisions,

it more often non-Indian. because those of mixed nations the father ethnic origin of the father. In mixed nations the father is double the figure recorded in the census. This is estimated total number of persons of known Indian origin this number could now stand at 55,041. However the in Ontario. At the estimated increase of 2.5% per year after were 220,121 for all Canada in 1961, with 47,862 those who gave "Indian as origin" to the census number. The census provides us with another measure.

registered Indians in Canada, 44,942 in Ontario a band list is enough. Today there are 211,796 this sense need have Indian forebears, to be on the official list of Canadian Indians. An Indian in the Indianness there are more precise measures. There is of Indians the psychologic and cultural definition

personality structure. "ness" is a cultural designation, and a formulation of mold and perpetuate his sense of being an Indian. "Indian" reflects the attitude of those who surround him, for they toward others - Indian and non-Indian. These feelings how he feels about himself as a person, and how he behaves toward a person who is Indian, and reciprocally, of identification. It is a result of how others behave culturally Indian. There are others who are of Indian blood and decent, but a question of feeling and acknowledge it. Being an Indian is not so much a matter of blood who are not aware of it, or being aware, do not live with Indians and identify with them. They are styles of "Indianness". Some carry no Indian blood but live in Ontario. There are many types of Indians - many does not simply refer to persons of Indian ancestry who many times in this paper, so it needs definition. It

A second way of grouping Ontario Indians is by cultural identification. There are endless shades of "Indianness" here, but in very broad terms, one person does not. An Indian individual in one stage in his life might identify himself as an Indian descendent of Indians and acts like an Indian, another might shift the level of his feelings markedly from strong identification with the Indian culture, and at another stage he would reject the designation altogether. He might do so for many reasons. He might simply feel that questions of social or ethnic identity offend him greatly. He might do so because he would reject the designation altogether. He is among them much pride of place and race. The Six Nations are found in the southern extremes of the province, and the Creees in the north. To be a person of Mohawk descent is just as significant as to be a descendant of a Highland Scots, or Hungarian. To come from a certain band and reserve has something of the same significance as to come from a certain town or county. An Ojibway Indian from the Cape Croker reserve in Bruce Peninsula will identify as much or more than a person of Scottish descent who comes from nearby Port Elgin.

Finally, there are tribal labels which apply more or less closely to all Indians. There are several large tribal groups. The tribes are conscious of their more or less closely to all Indians. There are several identities, and their location in the province. There is a degree of Mohawk descent in just as significant as to be a descendant of a Highland Scots, or Hungarian. To come from a certain band and reserve has something of the same significance as to come from a certain town or county. An Ojibway Indian from the Cape Croker reserve in Bruce Peninsula will identify as much or more than a person of Scottish descent who comes from nearby Port Elgin.

It is prejorative overtones. He might reject the label because of its prejorative overtones. He might reject the label because of its prejorative overtones. He might do so for many reasons. He might simply feel that questions of social or ethnic identity offend him greatly. He might do so because he would reject the designation altogether. He is among them much pride of place and race. The Six Nations are found in the southern extremes of the province, and the Creees in the north. To be a person of Mohawk descent is just as significant as to be a descendant of a Highland Scots, or Hungarian. To come from a certain band and reserve has something of the same significance as to come from a certain town or county. An Ojibway Indian from the Cape Croker reserve in Bruce Peninsula will identify as much or more than a person of Scottish descent who comes from nearby Port Elgin.

We live as much by myth as by historical truth. So far as attitude and behaviour is concerned, a myth may be a social fact today. Indeed the truth is known to few: most historical truths are no longer known to anyone. It is what people think the truth is which is relevant to our topic. This, as Durkheim put it, is a social fact.

10. THE TEXTBOOK QUESTION

TAIT, George, Breastplate and Buckskin, Ryerson, 1953
DEYELL, Edith, Canada A New Land, George, n.d.
BROWN et al., The Story of Canada, Copp Clarke, 1950
TAIT, George, When History books authorized, Ryerson, 1960.

*Tat, 1953, recounts this story without disapproval.
Indeed he dwells on it, but Deyell N.d. mentions the incident again without disapproval, p.99, but also without elaboration.

The disappearance of the hunting grounds is described too without elaboration or remorse. It just seemed to happen. The reserve system is dealt with in one sentence - "Reserves of land had been set aside for these Indians in many parts of the Dominion." The decline in numbers during the nineteenth century is reported and a list of European diseases is listed but says little is left out. Are the children who watch Peyton Place too tender to be told about V.D.?

In this chapter comparisons are made between the level of culture in Europe, and in North America at the time of discovery, and again today. The superiority of our technology is demonstrated repeatedly. "More than fifty times as many people live in Canada than other hand the story of life water and disease is told except to mention that not every white man sold life water; some were missionaries.

In these books the way of life of the Indian is not neglected. In Brown et al., there is a chapter of about 4000 words entitled "The First Canadians". One section is devoted to each Indian tribal group and to the Eskimos. It deals with the level of culture at the arrival of the white man through to present conditions. It describes the distribution of tribes and culture areas. It gives an account of the technology, particularly those taken from the Indian by the white man.

The question of handling religion in school books is surely a delicate one. How does one treat the role of missionary? How is the naturalistic belief of the native people to be described?

Reading the story of Cortez, one got the impression that his tribe and cruelty were drawn more realistically than the account of ChAMPLAIN shooting in cold blood two Mohawk Indian chiefs near Lake Champlain. Or is it that the richness of the Aztec civilization makes the seizure of a realm more commendable than the destruction of a few villages in New France.

Canadian story "wars and all", then the Indian story will be told objectively.

eritable way.

The writing in this book is at a simple level
presumably for lower grades and the fact that the French
came into the area and occupied it is treated in a touch
of uncommon humor, he states that Carter set up a
cross claiming the land for King France and "the puzzled
Indians watched the ceremony, little knowing what it meant.
If they had foreseen the future they might have
been tempted to massacre the Frenchmen in the shadow
of their cross." Even here the word massacre creeps in.
The Indians asked the French what is the difference
between hunting dogs and women quarreled.

old drafts swept through the cracks in bark sheets,
slow-moving swallows upleasant odors filled the air,
admittingly but the long house is reported to have been a
meeting place and community centre with no mention of
religious practices. Almost a page is devoted to the
legacy of the Iroquois and the concluding chapter says
"It has been suggested by some historians that the
practices established by the League of the Iroquois
would seem to be irrelevant, unless it was to remind the
reader that this highly sophisticated political system
cannot be taken too seriously since only one tribe
thought of it. Here is what it says: "In addition it
must be remembered that few, if any, Indians in North
America at that time were capable of creating a system
of inter-tribal government." He could have added that
and Buckskin tried to the new world. That tells us in Breastplate
found fertile islands, tall trees, good fisheries and
bountiful game. but there were no cities, no emperors and
no shining places. The people living in the new lands were
poor Indians who owned nothing of value." The author goes
on to say "King France was disappointed but still held
hope for better things in America."

The consequences of the writers covering this period
seems to have progressed little from the reports which
Cartier brought back to the King of France after his
first trip to the new world. That tells us in Breastplate
and Buckskin that Carter told the King that "he had
founded fertile islands, tall trees, good fisheries and
bountiful game. but there were no cities, no emperors and
no shining places. The people living in the new lands were
poor Indians who owned nothing of value." The author goes
on to say "King France was disappointed but still held
hope for better things in America."

Slow-moving swallows, unpleasant odors filled the air,
admittingly but the long house is reported to have been a
meeting place and community centre with no mention of
religious practices. Almost a page is devoted to the
legacy of the Iroquois and the concluding chapter says
"It has been suggested by some historians that the
practices established by the League of the Iroquois
would seem to be irrelevants unless it was to remind the
reader that this highly sophisticated political system
cannot be taken too seriously since only one tribe
thought of it. Here is what it says: "In addition it
must be remembered that few, if any, Indians in North
America at that time were capable of creating a system
of inter-tribal government." He could have added that
and Buckskin tried to the new world. That tells us in Breastplate
found fertile islands, tall trees, good fisheries and
bountiful game. but there were no cities, no emperors and
no shining places. The people living in the new lands were
poor Indians who owned nothing of value." The author goes
on to say "King France was disappointed but still held
hope for better things in America."

In summary, one can only say that in these simoly-written books, which treat the Indian along with the development of political institutions of the new world, the amount of detail that is man in the new world, the amount of detail that is possible is perhaps limited. The need is therefore indicated for other materials to meet this lack, but this has been dealt with in recombination.

It is interesting to ask why a province which allows a teaching of religion in the schools will authorise texts books which have so little material in North America. The most surprising fact of all is that these books is the almost complete neglect of an sanitary science. One wonders why the authors were not encouraged to religion. The interesting varieties of religion found in North America in greater detail. Moreover, to have done so would have made it possible to understand the breakdown in the social order of the Indians and the loss of that man cannot live without a moral order and an ethical system, there is no better place to demonstrate that this than in looking at the deterioration of a society, the Indians who have lived for so many centuries in Ontario.

quest^{ion}, they say a victory is when the white man wins a battle, a massacre is when he loses one to the Indian.

The slanted lines highlight drop-out and retention. For instance, 168 students in Grade IX in 1950 yielded 8 students in Grade XIII in 1954, a 40.7% retention. In 1957 there were 541 students in Grade IX, five years later there were 30 in Grade XIII, a retention rate of 5.5%. If calculations were cut off at 1960 a less optimistic rate of 5.5% would be available. These modest gains should be compared to the when this data is brought up to date such a analysis would be more sophisticated handling of this data is possible and and 1961 than between any two previous years. Obviously a more sophisticated analysis of this data is possible and between 1960 and 1961 is shown. The retention rate was higher between 1960 and 1961 than between any two previous years.

This table, provided by the Indian Affairs Branch, shows total gains in drop-out rates in non-Indian high schools. Unfortunately it has not been possible to subject this data to rigorous statistical analysis. If one looks at the eye follows the vertical lines, a substantial to total increase is shown for the twelve year period, although the most improvement is shown in Grade IX and the least in Grade XIII.

Year	IX	X	XI	XII	XIII	Total

A C K N O W L E D G E M E N T S
M E T H O D O L O G Y A N D

On this project the field work included visits to a number of Indian and Eskimo students now studying in the south. Besides this, there was occasion to talk in the north, and in the Sault Ste. Marie-Sudbury region fitting and interviewing in Brantford and London regions in Ottawa; the number of Indians and a number of recommendations.

In 1965 a study related to the use of radio in adult education for native persons in the north was carried out for the Indian-Eskimo Association of Canada. (Sim, 1965) This exercise did allow the writer to visit schools in the eastern Arctic and western Arctic. Although it was summer, nonetheless many of the teachers were still on duty. Meanwhile, a large group of teachers were met and interviewed.

- In 1963, a training project with the Indian Affairs Branch entitled an intensive four weeks recognition of the work branch in Saskatchewan as well as in southern Saskatchewan. It involved residential schools more visited in the development and education. A number of federal day schools and residential schools in the economy of the north as well as in southern Saskatchewan.

- Chief Liaison Officer in the Department of Citizenship and Immigration, which dealt with the problems of integration and intergroup relations of immigrants in families and Indians in urban settings, 1954-1962

The under-taking was given a start, so to speak, by the fact that the writer had done work previously in this and related fields.

The entire study occupied slightly over three months which was devoted to the three steps: exploring and documenting and secondary sources, interviewing and field observation, and writing.

The terms of reference for this study are recorded in Chapter I, where it is stated that this study depended largely on secondary sources plus some limited but nevertheless illuminating field trips.

At the official level, Indian Affairs Branch personnel in Ottawa and Toronto were helpful, particularly the Sonder Education Unit which had two centres, one in the Southwest and one in the Northeast. In the Ontario Department of Education, G. E. Seguin, Assistant Superintendent of Schools helped.

At the official level, Indian Affairs Branch personnel in Ottawa and Toronto were helpful, particularly the Sonder Education Unit which had two centres, one in the Southwest and one in the Northeast. In the Ontario Department of Education, G. E. Seguin, Assistant Superintendent of Schools helped.

The officers of the Indian-Eskimo Association and members of a committee to assist this study were most helpful, as were the officers of the "Hall Committee".

Informal consultations were also held with
professors colleagues, none of whom have had an
opportunity to examine this manuscript. Those were:
Professors Frank Waller (Carleton), Adolard Tremblay
(Laval), Joan Ryan and H. A. G. Cairns (University of
British Columbia), and Edward Rogers (Toronto). Ami
Armanson, then of Citizenship Branch, and A. J. Kerr
(a former teacher in the Arctic) of the Northern Co-operation
and Research Centre.

S U G G E S T I O N S F O R
F U R T H E R R E S E A R C H

It may be further stated that the findings,
opinions and recommendations of this study are,
considerable degree, analogous to those which would be
derived from a similar study in any other province. It
follows, therefore, that the reader may well assume this
is a compilation about the shortness of time, and budget,
coupled with a statement about the need for more research.
An expanded addendum to most studies of this type
is a complement to the shortness of time, and budget,
If the problems requiring investigation are pin-pointed,
it is helpful to other scholars who are searching for areas
for future study. It is a graceful way of asking foreign veneers
for real or imagined shorthcomings in the study itself. The
inclusion of a chapter on further research fulfills the
usual ritual requirements and it responds to a request of the
Indian-Haskimo Association of Canada and the "Hall
Gommitté" to give special attention to future research
requirements.

In Chapter 5 in suggestion there is a need for an Indian
culture and Research Centre. This would meet a primary
lack of a central repository for documents of all kinds
related to Indians in Ontario. A very large addition
item of cost in carrying on research and general reportage
results from the inaccessibility of existing documentation.
The data exists but it is widely scattered.
centre documents could be assembled or, if not brought together,
An active campaign to disseminate duplicated could be secured.
A flow of writing, photography and other materials is also
needed. Items such as the frontispiece of this study are
sensitive indicators of a state of mind at a certain
moment, but they are easily lost. In the long run this
basic service which must accompany a broad community
budget and an aggressive policy of accessions can provide
annotations is needed. Only a special library with a good
study to outline a full scale projection of all the fields
of investigation nor to supply a desire for research for
any single topic. Nonetheless we will touch on both
dimensions, (the wide range of problems, and the individual
topics), knowing that the resultant uniqueness inherent in so
doing.

It is not possible in the narrow confines of this
study to cover a wide range of cumulative annotations
of investigation nor to supply a desire for research for
any single topic. Nonetheless we will touch on both
dimensions, (the wide range of problems, and the individual
topics), knowing that the resultant uniqueness inherent in so
doing.

A simple listing, then a service of cumulative
annotations is needed. Only a special library with a good
budget and an aggressive policy of accessions can provide
basic services which must come first.

The data exists but it is widely scattered.
An active campaign to disseminate duplicated could be secured.
A flow of writing, photography and other materials is also
needed. Items such as the frontispiece of this study are
sensitive indicators of a state of mind at a certain
moment, but they are easily lost. In the long run this
basic service which must accompany a broad community
budget and an aggressive policy of accessions can provide
annotations is needed. Only a special library with a good
study to cover a wide range of problems, and the individual
topics), knowing that the resultant uniqueness inherent in so
doing.

Within the range of the Global outline of fields of inquiry, a series of specific problems are now listed, as they were suggested by others or as they arose from the day to day experiences of examining the topic of this paper.

Specific Problems

The following are areas in which theoretical work could be done. Besides this there are accompanying work, or operational research.

Governments and Public Administration and Welfare
Medicine and Public Health
Social Work and Welfare
Regional and Social Planning
Education, at all ages Levels
Community Development, and allied efforts of self help.

Social Science and Ethnology
Psychology
Economics
Geography
Political Science
History
Biology and Genetics
Archaeology

The fields of inquiry under which the Indian question might be pursued are as follows:

The Global View

E thnotherapy |

Such a bibliography would be of necessity cover a wide range of topics related to Indians in Ontario as Canadian topics, however a compilation of titles covering also needed.

Bibliography

Bibliootherapy A bibliotherapy for Indian education in Canada with subsections covering pro-vincial and denominational records would be a necessity if it is to fulfill its educational and scientific rôle.

be a preoccupation to future schoolarly and scientific life work. If the bibliographer were created under well- financed auspices, the quality of the works listed could then be evaluated. This would regulate a selected and annotated bibliography on the Sociology of Eskimo Education, published by the Boreal Institute of the University of Alberta, Edmonton. This was a student project, and as Professor B.Y. Card notes in his foreword, it will undoubtedly be revised or superseded by a more complete and detailed document. It is noteworthy that no such publicaton is available on Indian education in Canada and lacks should be met soon.

To encourage utilization of existing ethnographic methods of accountants of Indian life in Ontario, hard-to-find materials should be listed and some out-of-print titles published.

All of this would facilitate academic work. It would also enrich textbook writing, journalistic work, and background research for film and television production.

Moderate encephalographic work should also be fostered on contemporary nomadic and isolated groups in Northern Ontario.

The customs of Indians who lived in Ontario is often
in ways other than the interminable raiding parties which
up to now have fascinated non-Indian writers. The economic
and political organization of the Indian is well known to
only a few: the way they practised agriculture, how they
preserved food, how they bartered and exchanged goods, and
how inter-triual arrangements were made. At what level
of political organization did we find the Indian 150
years ago? Why were men like Brant and Tecumseh so
"powerful"? This suggests the need for collection of
biographical material, as well as the ethnographic data,
and letters, and illustrations.

• 56

Detailed monographie work is to be conducted on the Indian population of Canada, with sub-analyses for the provinces and regions. Estimates would be made on the numbers of Indians, (including those on and not on band lists). Then analyses would be made on income, occupation, years of schooling, and on all the regular census categories. This would then allow experts, planners, and Indian leaders to consider all the Indian question with some measure of precision.

It is understood that one factor which inhibits demography work is the reputed unreliability of census data for remote areas where enumeration is difficult. Adequate steps should be taken to improve the quality of census collection in 1971 where Indian populations are affected. Ontario should be encouraged to keep records of Indian achievement in its interest for education and ten years. The present policy tends to hamper educational research.

Community

Community A series of community studies of Indian settlements is proposed on a sample basis similar to the method used in the Hawthorn study. The areas to be studied would be selected so as to create a typology of communities ranging from those exposed to urban values to isolated nomadic groups. Those studies would analyse in depth a wide series of problems, a number of which are hereewith suggested:

the effects of various ameliorating programme welcomed for their effects on locality;

the impact of governmental and church entities on local values and organizations;

A comparative study of the values, needs and satiifications, and depressions of Indians resident in towns and reserves;

A study of the problems arising within the
acculturated processes relative to family stability,
economic and social depression and behavior
disorders, in order to gain a fuller understanding
of the kinds of pressures encountered by Indians;

A study of the political structure and decision-making in Indian bands in order to assess the means whereby Indian authority concepts can be utilized;

A series of community studies of Indian settlements is proposed on a sample basis similar to the method used in the Hawthorne study. The areas to be studied would be selected so as to create a typology of communities ranging from those exposed to urban values to isolated nomadic groups. Those studies would analyze in depth a wide series of problems, a number of which are herewith suggested:

The impact of governmental and church enter-
prises on local values and organizations;
the effects of various ameliorating programmes
viewed for their effects on locality;

a study of the political structure and decision
making in Indian bands in order to assess the
means whereby Indian authority concepts can be
utilized;

a study of the problems arising within the
economy and society relative to family stability,
agriculture and process relations to gain a fuller understanding
of the kinds of pressures encountered by Indians;

a comparative study of the values, needs and
satisfactions, and depressions of Indians resident
in towns and reserves;

Assumptions

A panel of experts should examine a number of working hypotheses which underlie large scale government, with a view to identifying the assumptions behind these programmes about administration, learning, work, mobility, society, social and individual pathological processes. From these investigations should come the descriptive research for a series of sociological and psychological studies to test these assumptions empirically.

Indians relative to movement to or from the reserve or outside of the reserve.
